How RDS Services, LLC achieves an enhanced subsidy recovery through high performance data aggregation and proprietary analysis systems

The advantages provided by the RDS Services, LLC reopening process for your organization are simple and are based on the principles around data aggregation and subsidy maximization techniques developed exclusively by RDS Services, LLC. We have developed proprietary custom built software that aggregates a multitude of unique data sets from various vendors to deliver maximum recoveries to your organization. Our systems and specialized analysts teams are able to develop your data into three silos of information that recover enhanced Retiree Drug Subsidy payments in full compliance with the Center for Medicare and Medicaid Retiree Drug Subsidy program regulations.

Like many plan sponsors in the Retiree Drug Subsidy program; the Prescription Drug Benefit manager has a significant disconnect of interests from your organization. The Prescription Drug Benefit manager is filling your membership's prescriptions and then reporting your utilization cost without any concerns on how the reporting affects your cost recovery through the Subsidy program. Moreover, the Prescription Drug Benefit manager does not have a vested interest or the experience, to assure the complete accuracy of the member and claims data that they supply you during the reconciliation and the subsidy payment request process.

RDS Service, LLC exclusive data recovery process will find your subsidy shortages due to under and non-reported eligible claims cost and will correct inaccuracies created by the Prescription Drug Benefit manager's data reporting that you rely upon. The RDS Services, LLC recovery process creates three silos that aggregate data that will include all eligible cost and increase subsidy recoveries an average of 10% but have exceed 24% in some cases.

The following is a brief chart of the significant areas of recovery sequencing that RDS Services, LLC will compile for your organization to enhance the data sets you rely upon to achieve the maximum subsidy under the program.

SILO 1: Rx Claims Recovery Sequences

Capture of pending claims not previously reported by vendor
Align higher dollar claims reported originally on the reconciliation with thresholds
Identify missing claims from vendor
Identify and provide inclusion of Part B claims
Identify and provide inclusion of drugs administered in institutional settings
Identify and provide inclusion of dispensing fees

SILO 2: Medicare Eligible Membership Recovery Sequences

Ensured retirement status in compliance with Retiree Drug Subsidy regulations
Verify retirement eligibility of members on vendor's eligibility files
Analyzed entire plan sponsor membership for misclassified or excluded retirees
Cross reference the Centers for Medicare and Medicaid eligibility dates
Match member's data with Social Security Numbers
Match member's data with Medicare Health Insurance Contract Number
Capture previously excluded spousal member claims
Review active policy groups for high-cost members potentially Medicare-disabled
Expand eligibility months of existing members

SILO 3: National Drug Code (NDC) Evaluation

Provide inclusion of National Drug Codes for drugs covered by Medicare
Align Retiree Drug Subsidy cost threshold and cost limit amounts by plan year
Evaluate and provide RDS reason code data supplemental response for inclusion
Provide explication of Retiree File Upload Errors for inclusion in subsidy

This is an abridged list of sequencing that the RDS Service, LLC turnkey software performs. A detailed discussion can be provided upon request.

Sincerely,

George Fox, LUTCF
National Sales Manager
RDS Services, LLC
